

We support:

- An all-Canadian company with an impressive safety record;
- thousands of new, high-paying jobs for 60 years;
- A cleaner environment;
- Consulting and planning before decisions are made;
- Developing alternatives like hydrogen, wind and solar;
- Considering next generation nuclear in Alberta.

We are the Canadian Nuclear Workers Council and we support Bruce Power's planning and consultation process in the Peace Country to consider building a clean energy hub including new nuclear, solar wind and hydrogen.

Today, 30 countries worldwide are operating over 400 nuclear reactors for electricity generation in a clean, safe and reliable way.

Nuclear power is safe and our industry in Canada has a strong track record of protecting the safety of workers, the public and our environment.

As we look to grow our economy and clean up the air we breathe, nuclear power in Alberta is a good option we should all be open to learning more about.

Don't listen to the myths and misinformation. Get the real facts about nuclear power.

Then decide.
